## About Us:

Patriot Racing is a high school STEM program that competes in 90-minute GreenpowerUSA races. The team has three separate cars: Blue (#1) and Red (#5) which compete in the Modified division, while White (#15) races in the Custom division. Together, our team has achieved over 50 race wins and 9 national championships, with more to come.

## What Is Greenpower?

Greenpower is a racing series in which high school teams build and compete with single-seat electric cars powered by two 12-volt batteries.

The Greenpower Education Trust hosted its first race in 1999 at the Goodwood Circuit in Chichester England.

Greenpower expanded to the United States in 2013 and is well known for annually running national championship races at the Talladega Superspeedway.
